

## **Talking Points on Karni Security Plan for meeting with Peretz**

There is a consensus that the Karni crossing security deficiencies are mostly related to personnel and process. While infrastructure and equipment improvements are needed, the immediate focus should be to address the personnel and process issues. Following are the main elements of the plan to enhance security at Karni.

- We are committed to enhancing security at Karni
- Dayton's team (and International community) is assisting us in developing the plan
- Immediately to control all access to the crossing Restricted Area
- To bring all security under the leadership of the PG to ensure the security process is adhered to in full
- Training, acquire better equipment, and upgrade infrastructure
- Our technical team is willing to present the plan to an Israeli technical team/person
- We can meet regularly to see how plan is progressing
